

Science

Electricity has changed our daily lives hugely since its discovery.

Which room in your house has the most electrical items? Draw a picture, or take a photograph, of this room and label the different items.

Let the magic begin!

Design Technology

No electricity!

Using junk modelling and recyclable items, build a basic moving toy. This could be a puppet or Kaleidoscope for example. It doesn't need to be very complicated, sometimes the simplest toys are the best!

Research

What is your favourite electrical item?

Draw a picture, or use a photograph, write a brief description (1 paragraph) of what it is, when it was first made and why it is your favourite item.

Talk Home Learning

Discuss with a grown up.

What electrical toys did your parents or grandparents have when they were a child? Do similar toys and games still exist today?

Instructions

Choose an electrical toy of your choice. Write a set of instructions explaining how it works. Avoid console operated games!

Remember you need to complete one task weekly, handing your book in on Thursdays.
